Department of Computer Science and Engineering
Midterm Examination Summer 2019
CSE420: Compiler Design
Total Marks: 20 Time Allowed: 1 Hour

- You **HAVE TO RETURN** this question paper and the answer script at the end of the exam. Your script will not be checked unless you do so.

1. What are the tasks of a **preprocessor** in a *language processing system*? Draw **NFA based lexical analyzer** for the following pattern and show the sequence of states entered when processing input “**xxbx**” [2 + 4 = 6]

a) xx b) xbbx* c) x* (b+) x d) b*xxb
2. Convert the *regular expression* $(m+n)^* n^* (m+n+\epsilon)^*$ directly to DFA over the alphabet, $\Sigma = \{m,n\}$ by computing **firstpos**, **lastpos** and **followpos** [10]
3. Given the following grammar, will a *recursive top down parser* be able to parse the input string “(a , a)” ? If not, modify the grammar to propose your solution to the problem. [2]

$$S \rightarrow (L) \mid a$$
$$L \rightarrow L , S \mid S$$

4. Show with an example, when *CFG* is used instead of *regular grammar* to describe a language. [2]
