Table of Contents CSE 425

           3. Example of Back-Propagation Algorithm
      v. MLP NN Design
           1. Data Representation
               a. Supervised data
               b. Unsupervised data
           2. Network Topology
           3. Network Parameters
               a. Learning Rate
                   i. Constant Learning Rate
                 ii. Adaptative Learning Rate
               b. Momentum
               c. Weights
               d. Bias
               e. Normalization of Data
           4. Training
               a. Stopping Criteria
                   i. Early Stopping
                 ii. Generalization
                      1. Generalized Delta-Rule

           5. Validations

    f. MLP usage
    g. Limitations of MLP
4. Recurrent Neural Network (RNN)
    a. Overview of the structure
    b. Example of RNN
    c. Reduction in complexity
    d. Different Architectures of RNN
        i. Deep RNN
        ii. Bi-Directional RNN
        iii. Pyramid-RNN
        iv. Naive RNN
    e. Problems With RNN
        i. Vanishing Gradient Problem
        ii. Exploding Problem
    f. Symbolic Notations of RNN
    g. LSTM (Long Short Term Memory)
        i. Architecture
        ii. Computational Components
        iii. Difference of LSTM vs Naive RNN
        iv. Peephole LSTM

       v. Information Flow of LSTM
      vi. Information Flow of PeepHole
     vii. Overcome of RNN problems
    viii. Shortcomings
      ix. Grid LSTM
       x. Difference of LSTM vs Grid LSTM

  h. Gated Recurrent Unit (GRU)
       i. Architecture
      ii. Computational Components
     iii. Difference of LSTM vs GRU
     iv. Information Flow of GRU

  i. FeedForward vs Recurrent NN
  j. Application of RNN
       i. Sequence to Sequence Chat model
      ii. Neural Machine Translation
     iii. Speech Recognition
     iv. Used in combination with other NN's
         1. Image Caption Generation

5. Convolution Neural Network (CNN)
  a. Overview
  b. Architecture
  c. Convolutional Layer
       i. Convolution Process
      ii. Filters
     iii. Stride
     iv. Black and White
      v. RGB layers
  d. Convolution vs Fully Connected Layer
  e. Max Pooling Concept
       i. Why Max pool Needed
  f. Compression of Fully Connected Neural Network
       i. Reducing Number of Connections
      ii. Shared Weights on edges
  g. Bundle pack
       i. Conv + Max pool
      ii. Conv + Max pool + Conv + Max Pool
  h. Flattening Concept
  i. CNN in keras
  j. CNN in text Classification

6. Kohonen Neural Network (Unsupervised Learning Model)
  a. Introduction
  b. Structure
       i. Rectangular
